With its ImageIR $^{\circ}$ 8300 hp, InfraTec introduces another top level thermographic camera model belonging to the ImageIR $^{\circ}$ high-end camera series. The implementation of a **digitally interfaced (640 \times 512) pixel MWIR detector** now allows **355 Hz full-frame** real-time imaging without compromising any thermal accuracy. Like all camera models of this series the ImageIR $^{\circ}$ 8300 hp and its cooled focal-plane array photon detector reach an outstanding **thermal resolution better than 0.02 K**. The new version was developed for most demanding operations in research and development and process monitoring fields. Its **modular structure consisting of the optical, detector and interface section**, makes the camera easily compatible to the related applications and for tailored configurations. An **integrated trigger interface** guarantees a repeatable high-precision triggering of quick procedures. **Multiple configurable digital inputs and outputs** serve as control ports for the camera or as generator of digital control signals for external devices. The optical channel consists of the **exchangeable infrared lens** as well as application-specific apertures, filters and reference elements. All exchangeable ImageIR $^{\circ}$ 8300 hp standard lenses can be **equipped with a motorised focus unit** easily operable from the camera's application software. It allows **precise, fast and remotely controlled motorised focusing** and is part of the autofocus function.
